

In silico microRNA candidates from Dictyostelium discoideum

Filesize: 6.91 MB

Reviews

This publication is fantastic. It is one of the most amazing publication i have got study. I am just pleased to explain how this is actually the best pdf i have got read through in my individual lifestyle and could be he finest publication for possibly.

IN SILICO MICRORNA CANDIDATES FROM DICTYOSTELIUM DISCOIDEUM

LAP Lambert Academic Publishing Jan 2012, 2012. Taschenbuch. Book Condition: Neu. 220x150x5 mm. This item is printed on demand - Print on Demand Neuware - Dictyostelium discoideum is one of the simplest studied eukaryote that possesses true multicellularity and provides unique advantages for studying fundamental cellular processes with powerful molecular genetic, biochemical, and cell biological tools. Small RNAs play crucial roles in regulation of gene expression in many eukaryotes. Different methods for elucidation of microRNA from the genome are described briefly. However, in absence of availability of microRNA sequence data from closely related species, the identification of microRNA in *D. discoideum* is challenging. Here we report the probable microRNA candidates from the social amoeba *D. discoideum*. We have used two approaches for prediction of microRNA from the social amoeba *D. discoideum*. Using comparative genomics approach, we identified 171 putative candidate microRNA and its precursor from *D. discoideum* genome sequence. In ab initio approach we have identified 79 putative candidate microRNA and its 116 precursor using neural network method. 84 pp. Englisch.
